

Solution Requirements

Date	12 July 2026
Team ID	SWTID-2026-7566
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how it will perform.

Functional Requirements (FR) define specific behaviors, functions, or features – what the system should do.

Non-Functional Requirements (NFR) specify the criteria that judge the operation of a system, rather than specific behaviors – how the system should be.

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely access the application. Basic authentication can be added for personalized usage.	High
2	Application Submission	Applicants can submit personal, income, employment, and credit history details for evaluation.	High
3	Prediction Engine	The system predicts credit card approval or rejection using a trained ML model based on applicant data.	High

4	Result & Reporting	Users can view the prediction result and generate a summary report of the approval decision.	Medium
---	--------------------	--	--------

Step 2: Non Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The application should generate predictions quickly and provide a smooth user experience.	Response time less than 3 seconds.
2	Scalability	The system should support multiple users and future feature expansion.	Supports 100+ concurrent users.
3	Security & Data Privacy	User inputs and stored applicant data should be handled securely.	Secure data handling and protected storage.
4	Reliability & Availability	The application should remain available with minimal downtime.	99% system availability.
5	Usability & Accessibility	The interface should be simple, intuitive, and easy for all users.	Easy navigation with responsive UI.
6	Other	The application should be maintainable and easy to update with new ML models or features.	Modular code structure and reusable components.
